### **DETAILED ACTION**

1. Claims 1-12, as amended on 12/13/2005, are pending in the instant application. Of these, there are two independent and ten dependent claims.

### ***Priority***

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

The listing of references in the Search Report is not considered to be an information disclosure statement (IDS) complying with 37 CFR 1.98. 37 CFR 1.98(a)(2) requires a legible copy of: (1) each foreign patent; (2) each publication or that portion which caused it to be listed; (3) for each cited pending U.S. application, the application specification including claims, and any drawing of the application, or that portion of the application which caused it to be listed including any claims directed to that portion, unless the cited pending U.S. application is stored in the Image File Wrapper (IFW) system; and (4) all other information, or that portion which caused it to be listed. In addition, each IDS must include a list of all patents, publications, applications, or other information submitted for consideration by the Office (see 37 CFR 1.98(a)(1) and (b)), and MPEP § 609.04(a), subsection I. states, "the list ... must be submitted on a separate paper." Therefore, the references cited in the Search Report have not been considered. Applicant is advised that the date of submission of any item of information

or any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the IDS, including all "statement" requirements of 37 CFR 1.97(e). See MPEP § 609.05(a).

The Examiner notes that the US patent publications listed in the search report have been considered by the Examiner, but will not be listed on any patent resulting from this application because they were not provided on a separate list in compliance with 37 CFR 1.98(a)(1). In order to have the references printed on such resulting patent, a separate listing, preferably on a PTO/SB08A and 08B form, must be filed within ONE MONTH of the mailing date of this communication. NO EXTENSION OF TIME WILL BE GRANTED UNDER EITHER 37 CFR 1.136(a) OR (b) to comply with this requirement.

3. The information disclosure statement (IDS) submitted on 12/13/2005 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

#### ***Reasons for Allowance***

4. **Claims 1-12** are allowed.

5. **Claim 1** recites the limitation *"the timing circuit varying a position of the acceptance time points within the validity duration intervals, so that the position is delayed within the validity duration interval to make room for previously accepting an access request passed by the multiplexing circuit from the second data processing*

*circuit and the position is moved toward a start of the validity duration interval in successive steps during application of successive access requests from the first data processing circuit within subsequent periods of validity."* Said limitation, in combination with the other recited limitations of claim 1, is not taught or suggested by the prior art of record.

6. **Claims 2-11** depend from claim 1, and are considered allowable for at least the same reasons as claim 1.

7. **Claim 12** recites the limitations "*The delay being reduced in successive steps during application of successive access requests from the first output, until the delay in a particular period of validity lies at least one minimum memory repetition period before the end of the particular period of validity; subsequently causing acceptance of at least one of the access requests from the second output, increasing the delay before a next access request of the first data processing circuit is accepted within the period of validity in which this next access request remains at the output.*" Said limitations, in combination with the other recited limitations of claim 12, are not taught or suggested by the prior art of record.

8. Baxter et al. (US 6,412,049) and Ramanujan et al. (US 5,202,973) were cited in the International Search Report as teaching or making obvious when taken alone the invention as recited in claims 1-12. Each reference teaches a system in which memory requests from multiple requesters are arbitrated, however, neither reference teaches the manipulating of the delay as required by claims 1 or 12 as cited supra.

9. Tang et al. (US 6,775,717) teaches arbitrating between multiple DMA requests, but does not teach or suggest said limitations.
10. Stone et al. (US 6,847,650) teaches arbitrating between isochronous memory requests, but does not teach or suggest said limitations.
11. Zumkehr et al. (US 2002/0083287) teaches delaying write accesses from a requester for a delay period, but does not teach or suggest said limitations.
12. Bodas et al. (US 2004/0003194) teaches delaying memory control signals to allow more time for input signals to stabilize, but does not teach or suggest said limitations.
13. Cypress (Implementing a 128Kx32 Dual-Port RAM Using theFLASH370) teaches arbitrating between memory requesters to simulate a dual port memory, but does not teach or suggest said limitations.
